## Your benefits with Genotype MTBDRplus

- Launching The Path-breaking Diagnostic Tool That Detects Deadly MDR and XDR Tuberculosis in One Day.
- High Sensitivity and Specificity Proven by Various Independent International Agencies like WHO, FIND, RNTPC (ICMR).
- Crucial Time Benefit Compared To Culture Phenotyping. Same Day Result.
- SAVE COSTS On Unnecessary MDR Treatment.
- Avoid Toxic Side-effects Associated With 2nd line drugs.
- Complete Correlation With Phenotypic Reference Method - Identifies The Most Frequent Mutation Occurring In The Rpo B, Katg, Gyra, Emb And Rrs Gene For Resistance Testing.
- For Pulmonary & Extra-pulmonary Samples For Tb
- Sample Processing By CDC (Atlanta, USA) Recommended Procedure & Environment.
- MTB Detection and Resistance testing to Rifampicin and Isoniazid from culture specimen and direct pulmonary patient material.
- MTB Detection and Resistance testing to ethambutol, flouroquinolones and aminoglycoides from culture specimen and direct pulmonary patient material.
